“The Memory Buddy”

In a future society where the elderly can become more reliant on technology for care, a new invention revolutionizes the lives of memory loss patients. The “ComfortCuddle” is a plush companion that is capable of monitoring vital signs, customizing recipe and fitness plans, and evoking joy through memory displays.

+ MY LIST

Background

16+ M

Americans provide unpaid care for individuals with Alzheimer's or dementia.

5.8 M

Approximately 5.8 million Americans live with Alzheimer's, with millions more worldwide.

As the aging population grows, many prioritize **health maintenance** and **memory preservation** over other needs or desires.

ComfortCuddle serves as a **resource for elderly individuals**, especially those with memory loss, by allowing them to become **more independent**. Healthcare providers working with dementia patients and their families can also be aided by this.

Persona

Elizabeth Thompson, 75, **lives alone** and copes with **Alzheimer's disease**.

Requires assistance in managing her **health and daily activities** due to her memory loss.

Once independent, Elizabeth now s**eeks assistance** with daily tasks and values companionship for **emotional support**.

Product Features

Main Product Features

Wellness

- Tracks **health data** (e.g. heart rate, blood pressure)
- **Shares data** with health providers + loved ones
- **Medical alerts** for danger

Health + Fitness

- Uses AI to customize **recipes + fitness plans**
- Encourages proper diet and exercise by **setting + tracking daily goals**

Memory

- **Multimedia display** for pictures and videos
- Replays recorded memories for **recall aid**
- Daily **wellness reminders**

With these three valuable features, the elderly will be able to **live independently** while still maintaining a **high quality of life**.

Wellness

- Users will wear a watch that **tracks their health data.**
- The watch will analyze heart rate, blood pressure, temperature, and other **important vitals.**

The ComfortCuddle can **inform the user** if they have any issues related to wellness (e.g. high temperature).

If there's any major fluctuations, **information is sent** to family members and/or health provider.

Sends out **medical alerts** if the user is in danger, which is especially helpful for those living alone.

Health and Fitness

Comfort Cuddle sets proper diet and exercise goals for its users.

The Bear will present recipes to the users and use AI to create **customized, healthy meal plans**. If the user is cooking themselves, the bear can also serve as a **cooking assistant** to walk them through making their meal.

There will be AI **customized exercise plans** based on different factors, such as whether outdoor or indoor fitness is better. The watch will also be able to **track their location and the duration of their workout** for safety purposes.

Memory

Multimedia Display

- Play videos and pictures stored on the phone.
- Stuffed animal holds the phone in front for easy viewing.

Reminder Notifications

- Sends notifications to remind the elderly of the time and type of medicine to take, along with meals and exercise.

Memory Recall

- Exhibit memories previously recorded by the elderly.
- Replay recordings, such as with family, to evoke joy.

Product Value

Benefits

- One significant benefit of ComfortCuddle app is its ability to provide **personalized and consistent support** for memory loss patients.
- Unlike human caregivers who may have limitations in availability the app can offer 24/7 assistance, reminders, and monitoring **tailored to the individual user's needs** and preferences.
- This constant support can help users maintain their **independence**, adhere to their **treatment plans**, and enhance their overall **quality of life**.

Pros/Cons

- **Connectedness** - feeling more belonging and less isolated
- **Health Monitoring** - keeping track of general health during the day, heart rate, steps, etc
- **Wellness Monitoring** - reminders to take vitamins, meals, drinking water
- **Cognitive Health Maintenance** - engaging in activities and exercises to support brain health and prevent cognitive decline.

- **Privacy Breach** - unauthorized users might be able to access the users' information
- **Learning Curve** - Elderly users, particularly those who may not be familiar with technology, may struggle to navigate and use the app effectively.

ComfortCuddle Differentiators

Due to the **all-encompassing nature** of this product, there **isn't much competition** in the market, particularly with the elderly audience.

There are products on the market, such as watches, that track vitals/location, but they **aren't made with the elderly as their main target audience**.

The **features and software** of this product is **specifically designed** for individuals with **memory loss issues**, such as dementia or Alzheimer's.

The ComfortCuddle is a **unique and comprehensive** product, **built specifically** for elderly individuals with **memory loss issues**.
